

Errata and Revisions of DC/TMD Documents

Richard Ohrbach

Feb 6, 2020

- On the Diagnostic Criteria table, “Myofascial Pain” was revised back to “Myofascial Pain with Spreading”, in order to reconcile the table with the decision tree previously updated based on recommendation by an INfORM member. (See July 4, 2018 entry.)
- The Diagnostic Criteria table, the Assessment Instrument package, and the .zip package are updated to reflect some prior changes that were not incorporated into the Assessment Instrument package.

July 4, 2018

- On the Diagnostic Criteria table, for Disk Displacement with Reduction, Examination E7 was clarified by adding “(protrusive or lateral)” for the type of click expected to fulfill criterion.
- On the Decision tree, change “Myofascial pain” to “Myofascial pain with spreading” based on recommendation by an INfORM member, in order to make the language parallel in structure with that for “Myofascial pain with referral”; otherwise, “myofascial pain” would appear to subsume “myofascial pain with referral”, which is not the intent. These names are clearly in flux and warrant further investigation and nomenclature development.

Apr 25, 2018

- Both North American and International DC/TMD examination forms (including field for diagnoses) incorrectly listed a diagnosis as “Dislocation”; the proper term is “Subluxation”. This was corrected in 2017 but the updated forms were never uploaded to the website. That error is now corrected.
- The individual forms, the Assessment Instrument package, and the .zip package are updated.

Jan 9, 2017

- Document “DC-TMD Self-report Instrument Scoring Manual_2014_06_06” contained an error in Appendix 2, where the “GAD-7” had received a typo in the form of “PHQ-7”. This was fixed, and some line spacing and header format in the same table was addressed. The initial document date of 2014 in the filename was a typo; it should have been 2016.

Sept 5, 2016

- On the Decision Tree, page 2, add “By examiner” to the joint noise box in the path for disc displacement with reduction diagnosis, in order to distinguish noise identified by the examiner, vs noise identified by the patient, as indicated clearly in the box at the top of the slide. This change is also consistent with what was already in place for the DJD diagnostic path.

Oct 23, 2015

- Document “DC-TMD - Diagnostic Criteria_2014_01_21.pdf”, version 5/25/2014, (indicated in the top portion of the document) was noted to have incorrect sensitivity and specificity values; source of the error is unknown but is assumed to reflect preparation of the table prior to final sensitivity and specificity estimates were computed for the published DC/TMD.

- Corrected version placed on website, with version date 10/23/2015 (indicated inside the document).

December 3, 2014

Updated Consortium documents

Document	Description of Update
DC/TMD page http://www.rdc-tmdinternational.org/TMDAssessmentDiagnosis/DCTMD.aspx	
Examination Data Collection: International	Added diagnosis list at bottom of page 2
Examination Data Collection: American	Added diagnosis list at bottom of page 2
DC/TMD Decision Trees	Word order changed for masticatory muscle palpation (2 secs), page 1; comment added at bottom, page 1; and modify working for maneuver <u>required</u> to open mouth, page 2. Revision date updated.
DC/TMD Diagnostic Criteria	Errors as noted under “Changes to this document, May 25, 2014” corrected: include omitted “or” for history in disc diagnoses, added diagnostic criterion note to Headache Secondary to TMD, and corrected minor punctuation discrepancies throughout. Also see April 29, 2014 change: corrected name of disorder for myofascial pain.
JFLS-20	Updated instrument name: added “20”
JFLS-8	Updated instrument name: added “8”

November 30, 2014

Update on Consortium documents related to DC/TMD translations, with gratitude to the various Translation Teams that have provided comments and especially to Wendy Knibbe at ACTA.

JFLS-20	Updated instrument name: added “20”
JFLS-8	Updated instrument name: added “8”

May 25, 2014

- On the Diagnostic Criteria table, Added “**OR**” to “Current TMJ noises by history” for each of Disc Displacement with Reduction and Degenerative Joint Disease, as per published DC/TMD.
- Added diagnostic criterion note to Headache Secondary to TMD, with regard to necessity of either a myalgia or arthralgia diagnosis in order to have a secondary headache.
- Corrected minor punctuation discrepancies.

April 29, 2014

- On the Diagnostic Criteria table, corrected name of disorder “myofascial pain”; was incorrectly stated as “myofascial pain with spreading”. While the latter is descriptive, as operationalized within the DC/TMD diagnostic structure, “myofascial pain” is the formal term established by Travell and Simons.

Update on Consortium documents

Document	Description of Update
DC/TMD page http://www.rdc-tmdinternational.org/TMDAssessmentDiagnosis/DCTMD.aspx	
DC/TMD	Link to published PDF active
DC/TMD Complete Instrument Set	Updated 1/29/2014 with clearer organization. NOTE: This document will again be updated in the next several weeks in order to provide clearer guidance for how the source document and any derived translations are to be cited.
TMD Pain Screener	Version previously posted on the website on the DC/TMD page was a previous draft version and not the intended final instrument. Now corrected.
Examiner Protocol	Updated in minor ways; see “changes to this document” at the end for specifics

Document	Description of Update
DC/TMD Decision Trees	Revised to incorporate local myalgia and myofascial pain with referral as the other two subtypes of myalgia, as published in the DC/TMD (Schiffman et al, 2014).
DC/TMD Diagnostic Criteria	Revised to incorporate local myalgia and myofascial pain with referral as the other two subtypes of myalgia, as published in the DC/TMD (Schiffman et al, 2014).
All instruments	Master English version footers have been updated in order to reflect URL and any copyright holder.
